B Playing Games

Time limit: 2s

Description

You have a collection of $\boldsymbol{N}$ distinct games, numbered 1 to $\boldsymbol{N}$. If you have started a game, you have to finish the game before you can start another game. Finishing game i takes $\boldsymbol{A}_i$ minutes. Each game can be finished more than once.

Each time game i is finished, before starting game i again, you have to finish another game first, or wait at least $\boldsymbol{B}_i$ minutes.

You want to finish as many games as possible. Determine the number of games you can finish in at most $\boldsymbol{T}$ minutes.

Input

The first line contains two integers $\boldsymbol{N}$ and $\boldsymbol{T}$ ($1 \le \boldsymbol{N} \le 200\,000; 1 \le \boldsymbol{T} \le 10^{12}$) separated by a space. The next $\boldsymbol{N}$ lines each contain two integers separated by a space. The $i+1$-th line contains integers $\boldsymbol{A}_i$ and $\boldsymbol{B}_i$ ($1 \le \boldsymbol{A}_i, \boldsymbol{B}_i \le 10^{12}$).

Output

The first line contains the number of games you can finish in at most $\boldsymbol{T}$ minutes.

Sample Input 1	Sample Output 1
3 11 2 1 5 100 3 10	4

Sample Input 2	Sample Output 2
5 10 5 1 6 1 7 1 8 1 9 1	1

Sample Input 3	Sample Output 3
5 4 5 1 6 1 7 1 8 1 9 1	0

Explanation of samples

In sample input 1, a possible sequence to finish 4 games is the following:

1. Finish game 1 (takes 2 minutes).
2. Wait 1 minute and finish game 1 again (takes $1 + 2 = 3$ minutes).
3. Wait 1 minute and finish game 1 again (takes $1 + 2 = 3$ minutes).
4. Finish game 3 (takes 3 minutes).

The sequence above takes 11 minutes. You cannot finish more than 4 games.

In sample input 2, you can finish any one game, but you cannot finish more than one game.

In sample input 3, you cannot finish any game.
